## HOW TO USE: WORKSHEETS

All of the worksheets in this pack are designed to be customized. Many individuals with Autism Spectrum Disorders (ASD) are masters of memorization. Doing the same activity twice will become more of an exercise of rote memory than practicing the skill you are teaching.

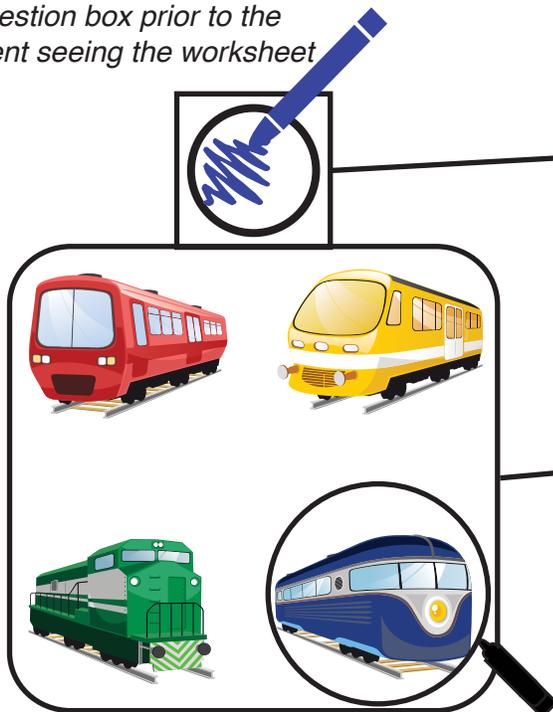

Also, many individuals with ASD struggle with writing and fine motor. All of the worksheets in this pack do not require writing - only the ability to circle, mark, or dot!

Each worksheet will take a few seconds to prepare ahead of time. The small effort to setup the activities provides hundreds of different ways to customize each worksheet.

We have provided several ideas - but use your own creativity to customize the worksheets to maximize your students' skills!

Below is the general concept on how to customize the worksheets using the "Color Concepts" worksheet.

*The teacher colors in the question box prior to the student seeing the worksheet*

Each problem has a "question box" that you will fill in. This is where the student will look to find and circle the answer.

Each problem has an answer box with four possible answers. There are four problems per worksheet.

*After all four answer boxes are setup, the student marks the correct answer.*

# EXAMPLE

## ◆ ◆ Big & Little

### **i** DIRECTIONS

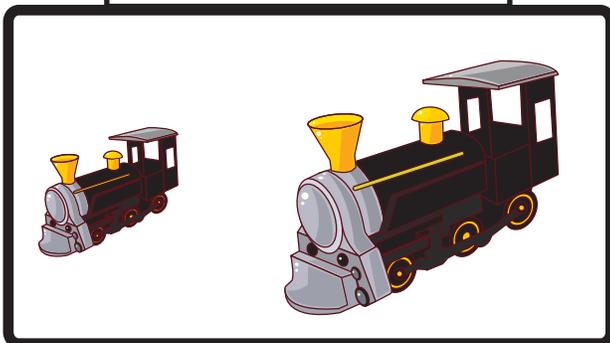

Fill in the little or big circle in each box.

You can also write the words in. For more advanced students you can write in the words only, or use synonyms like “huge”, “large”, “tiny”, or “mini”.

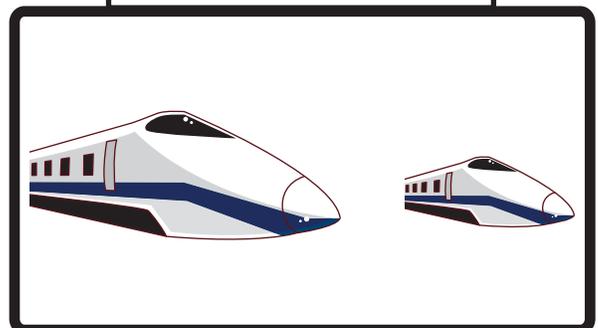

little ○

big ●

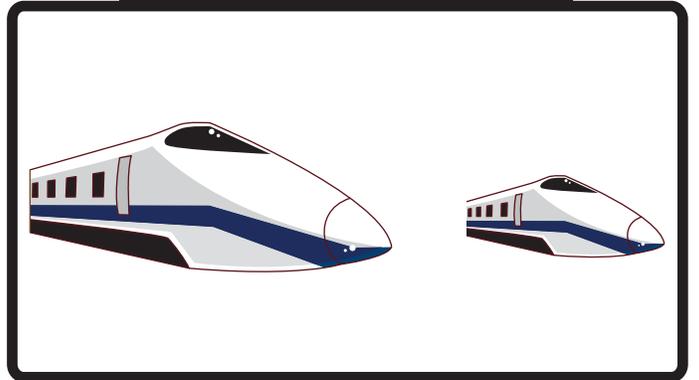

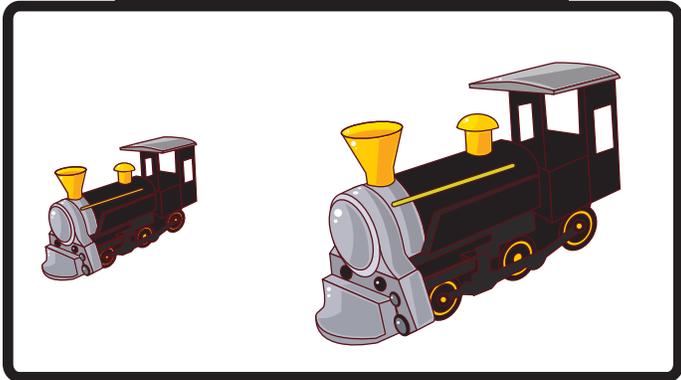

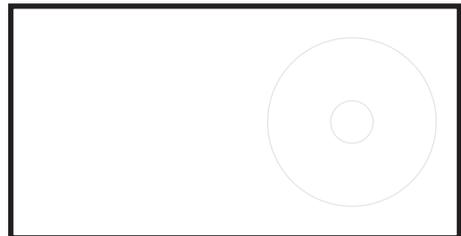

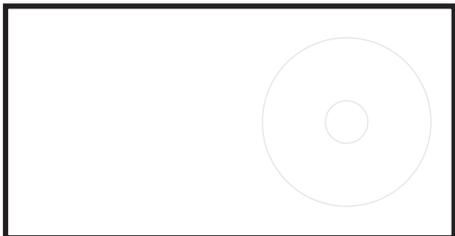

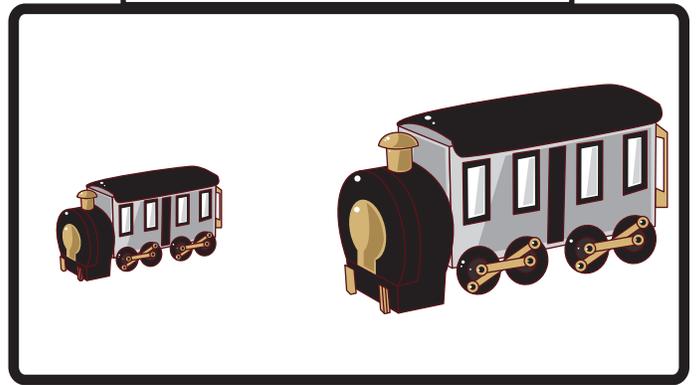

tiny ○

Name \_\_\_\_\_

Date \_\_\_\_\_

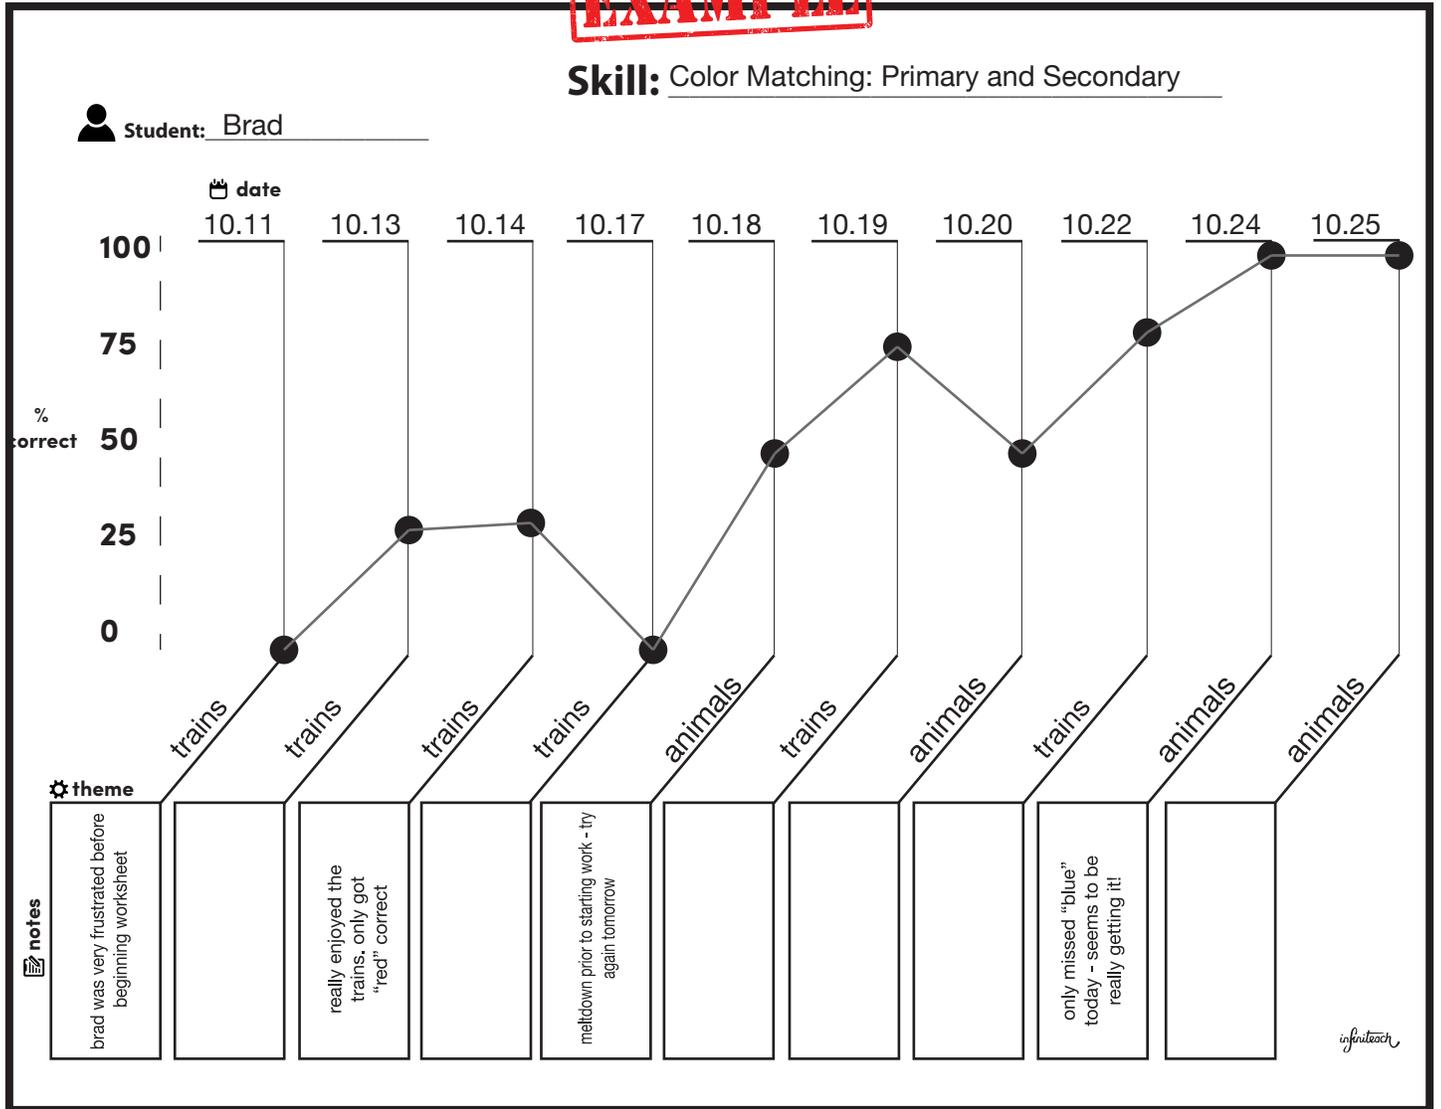

◆ ◆ Circle big and little. ○ ←

# HOW TO USE: DATA SHEETS

This pack comes with a data sheet for every skill. These data sheets will allow you to track progress as well as determine trends (ex: performs better on Mondays). To fill out these sheets write in the student's name as well as the skill. Each time a student completes a worksheet, write in the date. After the worksheet is complete, calculate the percentage correct.

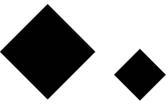

**EXAMPLE**

Make a dot on the line to indicate percentage correct. You can add information about the theme of the worksheet as well in the "notes" section. Record any important information about the instructional session.

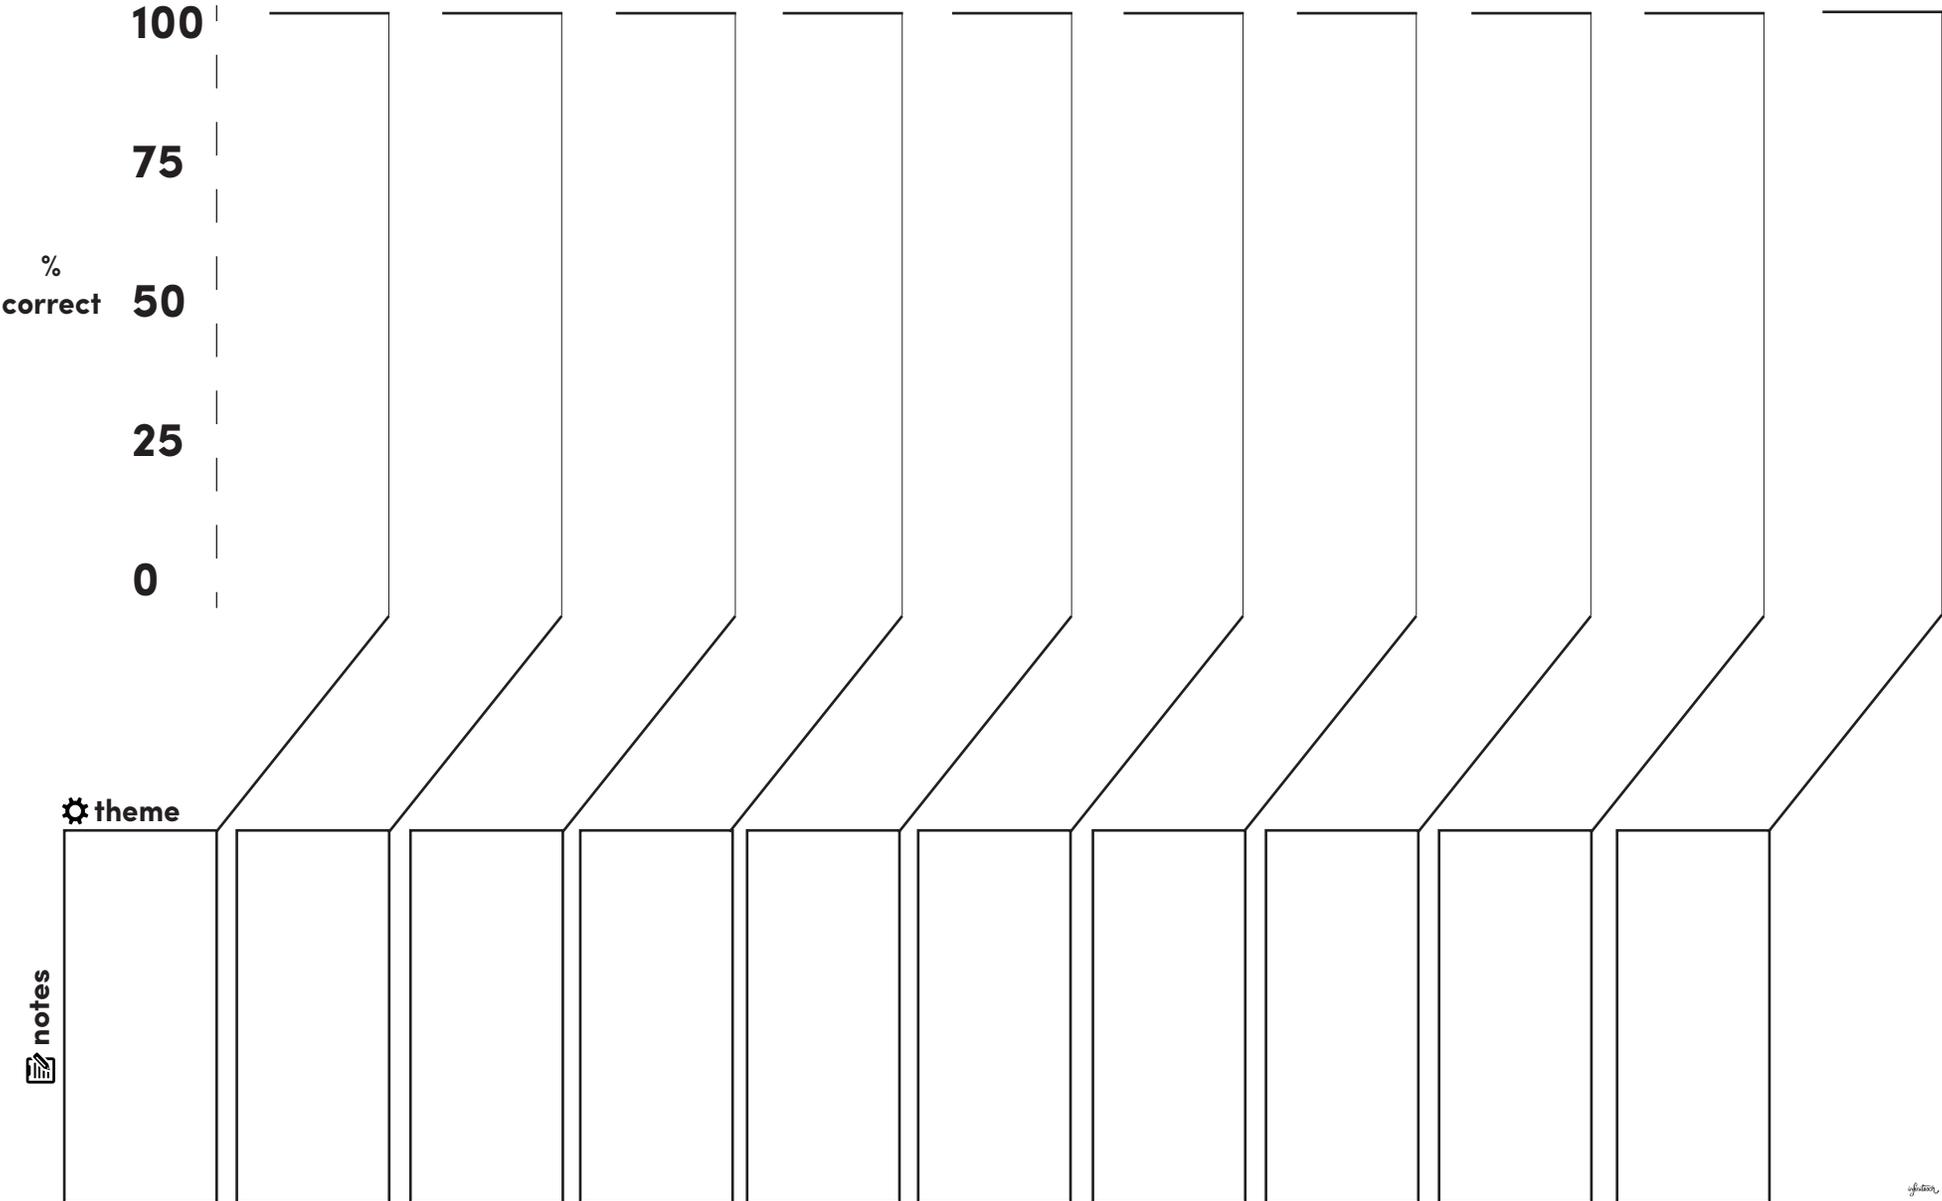

As you get more data points, connect the dots to form a graph.

# AUTISM CORE SKILLS

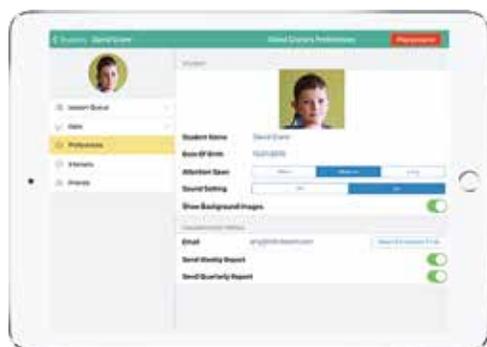

## WWW.INFINITEACH.COM

### Infinite Possibilities for Children with Autism

Infiniteach's Autism Core Skills is an iPad app that teaches early academic, social, and communication skills that are interactive and engaging for verbal or nonverbal learners. Autism Core Skills quickly and easily customizes each lesson based on your student's interests, attention span, and skill level.

### Social and Communication Skills

Accomplish your child's goals by practicing social and communication skills found in Autism Core Skills. All lessons are customized just for your child to thrive in a social setting. Building conversation skills has never been easier!

### Customized Profiles

Designed just for individuals with autism! Lessons are easily customized all based on their interests and attention span. Making learning easy and fun for your student!

### Data Collection and Shared Lessons

As each student completes their customized lessons, Autism Core Skills automatically collects and graphs data on their progress. Digital and printable homework lessons can be shared with others to help your student generalize the skills they are learning to a variety of settings.
